Salesforce Developer with over 2 years of experience developing and implementing solutions on the Salesforce platform across domains such as warehouse management, retail, logistic.

Hands-on experience in **Apex development, Lightning Web Components, and Salesforce administration**, with exposure to system integrations using REST and SOAP APIs. Able to understand business requirements and contribute to building scalable and maintainable solutions.

WORK EXPERIENCE

Software Engineer TIMES CARGO LOGISTIC Salesforce Platform Development - Maintain and enhance Salesforce solutions supporting logistics and supply chain operations. - Troubleshoot system issues, fix bugs, and ensure stable daily operations across multiple business units. - Implement and update business logic using Apex classes, triggers, and Lightning Web Components based on evolving operational requirements. - Continuous system improvements full-scale development ownership. Business Analysis & Requirement Support - Collaborate with internal stakeholders (operations, sales, logistics teams) to gather and clarify business requirements. - Analyze current workflows and propose system enhancements to improve operational efficiency. - Translate business needs into functional specifications and technical solutions within Salesforce. Business Analysis & Requirement Support - Manage Salesforce configuration including: - User provisioning and account management - Permission sets, profiles, and role hierarchy - Data access control and sharing rules - Ensure data security, and maintain platform stability. System Integration & Data Management - Maintain and monitor integrations between Salesforce and internal logistics systems. - Support API-based integrations (REST) ensuring data consistency and reliability. - Handle data migration, data cleanup, and synchronization issues across systems.	Nov 2024 - Present Ho Chi Minh City
Salesforce Developer AFR CLOUD COMPUTING Salesforce Solution Development - Design and implement Salesforce solutions across Sales Cloud, Service Cloud environments. - Develop custom Apex logic, Lightning components and automation workflows tailored to client-specific business requirements. Configure Salesforce platform features to support customer relationship - Configure Salesforce platform features to support customer relationship management, service operations and marketing processes. Enterprise System Integration - Integrate Salesforce with multiple enterprise systems including: - Order Management Systems (OMS) - Customer Relationship Management platforms - Content Management Systems (CMS) - Warehouse Management Systems (WMS) - Implement integrations using SOAP and REST APIs, ensuring reliable data Client Project Implementation - Develop customized Salesforce components addressing specific operational and business requirements for enterprise clients. - Collaborate closely with business analysts and stakeholders to translate functional requirements into technical implementation. Onsite Project - Samsung Electronics Korea 01/2024 - 03/2024 - Worked onsite with Samsung Electronics Korea to support development of internal CRM solutions. - Developed customized Salesforce components tailored to Samsung's internal customer management system. - Participated in solution implementation ensuring system performance and usability within the organization. Software Development Lifecycle (SDLC) - Participate in full project lifecycle including: - Requirement analysis - System design - Development - Testing - Deployment - Coordinate with project stakeholders to ensure timely delivery and system quality.	Apr 2023 - Jun 2024 Ho Chi Minh City

PROJECTS

Netsuite Integration	Jul 2025 - Present
Salesforce – NetSuite Accounting Integration	
Integration Developer (End-to-End Ownership)	
- Architected secure bi-directional sync between Salesforce CRM and NetSuite Accounting using SuiteTalk SOAP/REST APIs, RESTlets, and OAuth 1.0 token authentication. - Designed data pipelines with mapping, transformation, error handling, retry logic, duplicate prevention, and idempotency. - Developed SuiteScript 2.x Scheduled & Map/Reduce scripts for batch synchronization (invoices, payments, customers) and User Event scripts for real-time automation on key records (Customer, Sales Order, Invoice, Payment). - Implemented comprehensive logging, monitoring, custom records, and deployment across both platforms. - Managed full lifecycle: Apex callouts in Salesforce, SuiteScript development/testing/deployment in NetSuite, post-go-live optimization.	
Technologies: Salesforce Apex/REST/SOAP, NetSuite SuiteScript 2.x, RESTlets, SuiteTalk, OAuth 1.0, Scheduled/Map/Reduce/User Event Scripts	

EDUCATION

Good	Sep 2018 - Nov 2023
Posts and Telecommunications Institute of Technology (PTIT)	
The degree of Engineer Information Technology.	

SKILLS

Salesforce & CRM Platforms: Salesforce Sales Cloud, Salesforce Platforms, Lightning Web Components (LWC) , Salesforce Flow Automation, Salesforce Org, Administration, User & Permission Management.	
Programming & Development: Apex Development, JavaScript / TypeScript, HTML/CSS & SLDS.	
System Integration: REST/SOAP API Integration, ERP Integration (NetSuite), E-invoicing Integration (VNPT).	
Development Tools: Git Version Control, Visual Studio Code, Salesforce Data Loader, Salesforce Workbench, AI Extension for coding and research.
